

ABOUT

The ScanStone **Gemini** grass topper is versatile and it can be front or rear mounted, with a standard V-belt drive system. It leaves an excellent cut and is complete with a rear mounted roller for height control.

The ScanStone **Pegasus** grass topper is rear mounted only and can work directly behind the tractor or offset to the right of the tractor. The machine can fold up for doing hedges or fold down for doing ditches. There is an inboard or outboard gearbox option for greater versatility.
